

Pole Cap Installation Instructions

1. Position pole cap on backside, top area of push button frame or Navigator so the top surface of the pole cap is flush to the top surface of the frame/Navigator. Mark on frame/Navigator where two holes are on the pole cap.
2. Drill and tap two 1/4-20 holes.
3. Attach pole cap to frame/Navigator with two 1/4-20 screws provided.
4. If pole cap is being attached to a 2 Wire or 4 Wire Navigator, apply silicone to inside holes to prevent water from getting inside the Navigator through these holes. Also, apply silicone to the seam between the pole cap and Navigator.
